DX-1G SET

DX-1G set includes camera, housing, sea arm light single set, YS27DX strobe, fibre-optic cable, strobe mask set, battery & charger

## Experience the next generation

With an exceptional quality of image reproduction that exceeds 10 million pixels, the highly functional and stylish housing, and above all, the innovative features specific to the underwater environment make this the world of the DX-1G.

The next generation of underwater digital camera systems is here with the new Sea & Sea DX-1G. Achieving a decisive balance between style and performance, offering an uncompromising and sophisticated design together with advanced technology the DX-1G sets the benchmark. The DX-1G combines the flexibility and instant access of a compact digital camera with the control you'd expect from an SLR, giving camera enthusiasts the opportunity to create a superior photo finish on the fly. The exceptional quality of image reproduction that exceeds 10 million pixels, the highly functional and stylish housing, and above all, the innovative features specific to the underwater environment make this the world of the DX-1G. Boasting superb optical clarity thanks to a high performance lens utilising low-dispersion glass and a high refractive index which effectively suppresses distortion, colour aberration and light fall-off, the DX-1G ensures your pictures are clear all the way to the edge. Customisation is also a big part of the DX-1G experience as settings can be customised to fit your personal style to enable full versatility and ease of use and to make the DX-1G even more user-friendly frequently used settings can be toggled at the touch of a dial.

### NEW SEA & SEA MODE

The new Sea & Sea mode, which captures the beautiful colours of the sea, is a still picture mode that has been developed exclusively for underwater photography. The ideal colour balance is based on the knowledge and many years of underwater imaging experience at Sea & Sea. It enables anyone to capture a great image easily and the mode has also been optimised for taking photographs using Sea & Sea accessories such as (strokes), as the ISO sensitivity is automatically set at 100. Capturing images of the underwater world has never been easier.

### MAIN FEATURES OF THE DX-1G CAMERA

- High-quality design with premium feeling & superior operability
- Equipped with two fibre-optic cable sockets
- Equipped with a built-in flashlight diffuser
- All shooting functions on the 1G camera are operable
- Wide-angle conversion lens for DX-1G is available (optional)
- Outer hood & inner hood for LCD monitor
- The highest reliability with a depth rating of 55m/180ft
- Soft grip protector for stability & comfort underwater
- 10.01-megapixel CCD for precise image reproduction
- 24-72mm 3 x optical zoom for wide-angle photography
- Equipped with 2.5 inch, 230 000 pixel LCD monitor
- Compatible with RAW data storage
- Vibration correction for capturing a moment precisely
- 1cm/0.4 inch Macro for ultra close-up photography
- SEA&SEA mode, ideal for underwater photography
- Aperture-priority mode and manual exposure mode also available
