NEW SEA & SEA MODE

The new Sea & Sea mode, which captures the beautiful colours of the sea, is a still picture mode that has been developed exclusively for underwater photography. The ideal colour balance is based on the knowledge and many years of underwater imaging experience at Sea & Sea. It enables anyone to capture a great image easily and the mode has also been optimised for taking photographs using Sea & Sea accessories such as (strobes), as the ISO sensitivity is automatically set at 100. Capturing images of the underwater world has never been easier.
